

# MAT320 Practice Problems

10/3/2023

**Problem.** A *rectangle* is a subset  $(a, b) \times (c, d) \subset \mathbb{R}^2$  where  $b > a$  and  $d > c$ . We write

$$l((a, b) \times (c, d)) = (b - a)(d - c).$$

For a subset  $S \subset \mathbb{R}^2$ , define

$$\mu^*(S) = \left\{ \sum_{i=1}^{\infty} \ell(R_i) \mid R_i \text{ a rectangle for } i = 1, \dots; S \subset \bigcup_{i=1}^{\infty} R_i \right\}.$$

For  $a = (a_1, a_2) \in \mathbb{R}^2$  and  $r > 0$ , write

$$B(a, r) = \{(x_1, x_2) \in \mathbb{R}^2 \mid \sqrt{(x_1 - a_1)^2 + (x_2 - a_2)^2} \leq r\}.$$

Prove that  $\mu^*(B(a, r)) = r^2 \mu^*(B((0, 0), 1))$ .

**Problem.**

Find the measure of the set of all numbers  $x \in [0, 1]$  for which there are no 4s in any decimal expansion of  $x$ .

**Problem.** Let  $A_i$  be subsets of a metric space  $X$  for  $i = 1, 2, \dots$ . Prove that if  $B = \bigcup_{i=1}^{\infty} A_i$  then  $\overline{B} \supset \bigcup_{i=1}^{\infty} \overline{A_i}$ . Show that the latter inclusion does not have to be an equality.

**Problem.** An  $F_\delta$  set is a set that is a countable union of closed sets. Show that continuous functions map  $F_\delta$  sets to  $F_\delta$  sets.

**Problem.** Problem 2.4.19.

**Problem.** Show that a function  $f : \mathbb{R} \rightarrow \mathbb{R}$  that is continuous except at a finite number of points is measurable. (On the quiz, I would remind you of the definition of a measurable function.)

**Problem.** Is the subset

$$\bigcup_{n=2}^{\infty} [1/n, 1 - 1/n] \times \{1/n\} \subset \mathbb{R}^2$$

compact?
